Bournemouth & Poole College

Electrical and Electronic Engineering
Giving you the skills for a successful career
More than 95% of our Electrical and Electronic Engineering students get a job or go on to further study

Engineering is thriving in the Bournemouth and Poole area, but many Electrical and Electronic Engineering companies have difficulty finding employees with the technical skills they are looking for. That's where we come in.

We work closely with major local employers such as Cobham plc, Superior Seals and Lymington Precision to put together our courses. This ensures that you are learning the techniques that are required by the industry. And more than 95% of our students get a job or go on to further study so we must be doing something right!

Our courses are a blend of practical and academic-based learning and you'll get to work with cutting-edge technology such as rapid prototyping and robotics. You'll work on live projects with real employers, giving you hands-on experience and great contacts within the industry.

There are many different areas you could go into, such as mechanical engineering, construction engineering and electronic engineering where you could be earning £36,000 a year. But the skills you will learn are not only extremely useful for the engineering industry, but are transferable and valuable in other sectors too.
