

The Course

In brief...

This course is designed for domestic heating engineers to comply with the relevant legislation on energy efficiency.

Installers play a key role in advising householders on which boiler to install and it is important to install energy efficient heating systems in order to reduce carbon dioxide emissions and to comply with building regulations. This training programme will help you understand the relationship between energy and climate change and how these impact on your day to day business.

What the Course Leads to

What courses can I do after this?

On successful completion of this career development course The College would like to congratulate you and hope that you would recommend it to others in your industry. If you would like information on any of our other career or personal development courses please contact the helpline.
